

Pointsec - protecting enterprises on the move

In today's mobile environment, security is more important than ever. Enterprises must ensure that their information is protected no matter where it is stored. Access to information at any location creates opportunities, but also poses new security threats. As information becomes more accessible, it also becomes more exposed. With the right solution, however, these new threats can easily be neutralized, enabling large organizations to safely deploy the very latest mobile devices without compromising security.

Our offer

Pointsec Mobile Technologies has developed advanced IT security solutions for the last fifteen years. Our mission is to create trust by delivering security solutions for personal computing devices, such as laptops, PDAs, smartphones, USB media, memory cards and floppy disks, on which users store an increasing volume of business and personal information that must be protected. Pointsec Mobile Technologies is a part of Protect Data, a financially strong corporation listed on the Stockholm Stock Exchange.

Security certifications

Pointsec Mobile Technologies has earned numerous vital security certifications, including FIPS 140-1 and 140-2 as well as Common Criteria certification. FIPS certification is regarded by the US and Canadian governments and international companies as the de facto IT security standard. FIPS certification guarantees the quality of Pointsec products. In 2003, Pointsec also achieved Common Criteria EAL-4 certification for Pointsec® for PC. Common Criteria certification is an internationally recognized security standard that gives companies and their products a verifiable claim to quality and security strength. In 2004, for the third year in a row, Pointsec was placed in the "Leader" quadrant in a major mobile data protection product study released by the industry research firm Gartner, Inc. The two major criteria assessed were Ability to Execute and Completeness of Vision.

Broad experience

Our experience in working with many different kinds of organizations has given us the expertise required to fully support your business. Over the years, Pointsec has successfully deployed enterprise-wide solutions for many prominent organizations including: the US Department of Justice, the US Department of Defense, the US Drug Enforcement Agency, Ericsson, TeliaSonera, Telenor, Astra Zeneca and Cap Gemini.

Professional services and support

Pointsec offers a sound investment for your company's future security, from the start-up phase through implementation, operation and beyond. Pointsec's professional services provide the experience and knowledge resources, in the form of training and consulting, that you need to ensure that deployment in your organization is rapid and simple. By working closely together with your team, we make sure your investment reaches its full potential. With the solution in place, our global support organization, available 24/7, will help you to maximize your investment by ensuring that the best assistance and the most up-to-date solutions are always available.

Global presence

Today, Pointsec has a global presence with offices in the USA, in Australia, in the Middle East and in Europe (Finland, France, Germany, Norway, the UK and Sweden). Offices are currently being set up in Japan. For other parts of the world, we work with specially selected, trained and security focused partners.

Reliable partner

With Pointsec you get a security partnership that goes with you wherever you go. Pointsec protects your company's critical information and provides a trusted platform that enables your organization to fully utilize the potential of mobile computing.

Pointsec's Multi-Platform Solution

Our mission is to provide security solutions for personal computing devices, such as laptops and PDAs, containing user credentials and critical information. Our multi-platform solution enables large organizations to take full advantage of today's mobile environment without compromising security. At the office, at home, or on the road—your information is always fully protected with Pointsec®.

Pointsec® for PC

Pointsec® for PC is an award winning, enterprise security product which ensures that the intellectual property stored on laptop and desktop computers remains private and secure. Pointsec for PC is deployed and administered across the network. And, as encryption is both automatic and transparent, security is enforced without requiring any user intervention.

Pointsec® webRH®

Pointsec® webRH® (web Remote Help) offers a secure and easy method of providing Remote Help to Pointsec for PC users at the office, at home or on the road, making it possible to take full advantage of the mobile workplace.

Pointsec® for PDAs

Pointsec® for Pocket PC and Pointsec® for Palm OS® protect critical information on the PDAs used in your company. Without noticeable effect on the performance of the PDA, Pointsec makes the information stored on your PDA secure and inaccessible to anyone without permission, even to world-class hackers.

Instead of traditional passwords, Pointsec for PDAs uses a unique, patent pending, picture-based PIN code, PicturePIN®. PicturePIN is an easily remembered set of symbols, providing a user-friendly interface that can be operated by one hand. The symbol set can be adapted to suit your company's profile.

With Pointsec® for Pocket PC, users of PDAs powered by the Microsoft Pocket PC operating system, enjoy automatic, real-time encryption of all information—providing convenient and enforceable handheld security for enterprises on the move. Pointsec for Pocket PC's encryption module is FIPS 140-2 certified and, as such, you know that it has been tested and approved by the National Institute of Standards and Technology (NIST), a highly respected and internationally recognized certification organization.

Pointsec® for Symbian OS

Symbian-based smartphones, which combine PDA and mobile phone functionality, are protected with Pointsec® for Symbian OS. Pointsec for Symbian OS protects all of your information, including graphics, text and e-mail messages, Word and Adobe Acrobat documents as well as PowerPoint presentations. It also protects information stored on memory cards.

Pointsec® Media Encryption

Pointsec® Media Encryption extends automatic, real-time encryption of important information to removable media. Integrated with Pointsec for PC or on its own, Pointsec Media Encryption protects and encrypts your sensitive information on memory cards, storage media and floppy disks, and in transit by e-mail.

Welcome to the Pointsec family! We hope you will reap many benefits from using Pointsec on all your platforms. Pointsec provides secure, yet transparent and easy to use solutions, for organizations that need to ensure the integrity of their information.
